Vio Engine

Engineering consulting & software

Capability statement

November 2026

Build better systems. Keep them running.

Vio Engine is a UK engineering company providing consulting services for AI, cloud, platform and data systems. Our forward deployed engineers work alongside your team to build and improve production systems, with ownership and handover agreed from the start. We also develop VioGraph, our self-hosted graph software.

Engineering services

AI Engineering

AI applications, agents and automation, with evaluation, monitoring and cost controls built into delivery.

Platform & DevOps

Developer platforms, automated delivery and infrastructure as code that fit the way your teams work.

Security & Compliance

Cloud access, credentials and delivery controls, with technical evidence for security and supplier reviews.

AI Infrastructure

GPU platforms, model deployment and monitoring, designed around workload demand and operating costs.

Cloud

Cloud architecture, migrations and modernisation, with resilience, cost and day-to-day operation considered together.

SRE & Reliability

Reliability targets, useful monitoring, incident response and practical support for systems already in production.

Data

Data pipelines, analytical platforms and graph models for reporting, connected-data questions and AI applications.

How to engage us

Embedded engineer

A senior engineer joins your team for an agreed piece of work or period.

Embedded team

A team working alongside yours on a defined outcome, with people and responsibilities agreed before starting.

Build and hand over

A system delivered to an agreed scope, with documentation and a practical handover.

Scope, engineers, responsibilities, location and commercial terms are agreed before work starts. Time and materials or an agreed scope with milestones. Direct contracts or subcontracting through a prime supplier where agreed.

Selected engineering work

These examples draw on engineering experience gained before and since Vio Engine was formed, including work through partner consultancies. Clients are described by sector. Further detail is available on request.

Global bank	**Automated releases for a wealth-management platform** Releases were automated from end to end, with continued production support from the engineers who built the platform.
UK public sector organisation	**An AI agent for incident investigation** The agent is deployed and in use by the operations team. Further agents are planned.
UK central government department	**Legacy applications moved to Kubernetes** More than a hundred applications ran on Kubernetes with releases managed through GitLab. The department's own teams owned and operated the applications.
Global bank	**Graph analytics for bank analysts** Measured queries in this engagement returned in under 10 ms, with each workspace started when needed and shut down after use.

VioGraph

A self-hosted graph intelligence platform for exploring connected data. Contact us to request private evaluation access and discuss your deployment, integration or support requirements. Evaluation is separate from our consulting services.
